1. Introductions

1.1Brief Introductions

Android is the video surveillance application designed for our monitor devices. This application supports Android that is higher than 4.1 released. The manual will mainly introduce how to set and use XMEye.

1.2 Main Functions

Main functions

- Support Chinese, English;
- View the video on real time via WIFI and GPRS;
- Support two ways to login:user and local;
- Support serial number、 IP address and DNS;
- Support multiple channels to change(max to 16);
- Support remote playback;

• Support configuration , modification and remove about device parameters;

- Support Pan control;
- Support snapshot and view;
- Support video and view;
- Support audio;

• Support real time intercom;

2. Installation

2.1 Acquire XMEye

Users can acquire this app through three ways:download from xmeye.net,download from android store:http://apk.hiapk.com/html/2014/02/2361770.html,and from manufactures

1 、 If you download it from certain websites,scan QR code to install to your mobile device.

2.1a

3. Operating instruction

3.1Login interface

When installing successfully, click *MEye*, then the application will work. Enter the login interface, select remember password and auto-login, and two ways to login: cloud and local, 3.1a:

Cloud login : user name and password are used for registering when logining http://xmeye.net/.When device is added and saved on the server,you can acquire device list ,also you can add device .Please refer to the way of local login ,as shown below 3.1c

• **Device list:** Display device directory

• Local record: the video saved in local is manual video and

downloaded video when previewing or playback, for more details:

[Remark: If there is no memory card in the mobile, local record can't work]

Play video:

> Click " i to enter main menu, select "local record", then enter the interface;

Click some video, for example 2015-05-15 17:21:32, then

view it

➢ Click " i to enter main menu,select "local record"to

enter the interface;

- > Click" [2]", like 3.6e, click "delete"to select needed record
- Click "cancel" to turn back to "local record";
- ➢ Click "□□□" to back main menu
 2410:37 ...029K/s ♥ TP-LINK 564

3.6e

[Remarks]:

1.In the interface of playing video, click the interface, logout and back to previous operation((delete a video or image, select "cancel" to return previous interface)

2. Only have videos can be searched, otherwise, it will not work.

• Local album: the images saved in album are snapshoot when viewing monitor video; click album, you can view all kinds of images, which show as thumbnail, and magnify them, other operation is same as local record;

• Alarm push: Open it, when touching it, the mobile will send messages and voice, as shown 3.6e.

• Cloud storage: click it, then click cloud storage device, there will be

relevant tips or show results, like 3.6f

• Local settings: View software version, set up device download, automatic highlight and hard decoding,like3.6g

• Click "help", there are operating instruction.

• Click "check update", client will check whether there are new version or not.

• When checking new version, it will popup "version upgrade", and make a list about modification, click "OK" to download and install new APP, "NO" means giving up updating, there is "the version is the lateest" when it searches new client.

• Device upgrade: There are three ways to make a choice:never,WIFI and auto

• Automatic highlight: open it, the mobile will adjust backlight automatically when previewing video, close it means no working.

• 5.Hard decoding: Open it means hard decoding, or else soft decoding

• Logout: Back to login interface

3.7Switch Language

When you switch the language on your phone ,the language of the application will be changed as well.For example ,it' switched to English on your phone,the language of application will be switched to English as well.
